Dear Gabor,

I'm Vincent, the leader of the big data application team in China National GeneBank.

We now want to develop a suit of data visualization tools which can be integrated with our bioinformatics platform, like *db.cngb.org/search* and Hadoop system which both are under developing.

Since we have collaboration with ICGC team and together maintenance the China mirror (<https://icgcportal.genomics.cn/>), we find that your team's great work on the data visualization. :)

Can we make some collaboration on bioinformatics data visualization developing work or use your system through paid license?

Sincerely,
Vincent Wei, Project Manager, China National GeneBank
